Graphing Piecewise FunctionsV1

A piecewise function is a function represented by two or more functions, each corresponding to a part of the domain. A piecewise function is called piecewise because it acts differently on different "pieces" of the number line. Possible Descriptions:

- The graph is a function
- The graph is composed of part of a line

Piecewise, Absolute Value, and Step Functions

Step Functions A step function or staircase function is a piecewise function containing all constant "pieces". The constant pieces are observed across the adjacent intervals of the function, as they change value from one interval to the next. A step function is discontinuous; you cannot draw a step function without removing your pencil from your paper.
